

EDUCATOR LORI BEYER: So we started off with uh, the coding mat that we made for the floor where the kids learn their general directions um, by telling each other and responding and following their way along the mat. Um, and then we've graduated to technology um, on the iPads with coding on the iPads and it has really helped them to understand um, the concepts of being able to move the little person, or whatever it is that they need to move on the on the App to where it is that they need them to go. So instead of saying it out loud like they do with the coding mat, now they've been able to internalize that and now can get um, where they need to go on the iPad individually and all on their own.
