

DENISE BUTTENAAR TELT: What do you know about coding?

EDUCATOR LORI BEYER: Um honestly I don't know that much about coding at all. Uh everything I have learned about coding I've learned since I've started in my classroom um, with the coding mat. Basically it's just another way of following directions for the kids. It teaches them a little bit of a different language and it's great in them learning their directionality. Um, as far as anything above Kindergarten level I really don't know much and um, if I can do it anybody can do it.
